Solutions Brochure

Who We Are

Concept Nova – a subsidiary of the Concept Group – is Africa's fastest growing technology hub, providing smart and cost-saving solutions in the areas of Asset Management, Theft Prevention and Remote Monitoring / Tracking.

Centered primarily on continuous improvement, we deliver technology-driven solutions that increase transparency, efficiency, cost savings and revenue generation. Serving over 600 businesses across diverse industries and thousands of individuals, we are changing the face of technology solutions by developing and delivering premium service offerings at competitive and affordable prices.

At Concept Nova, we don't just deliver technology solutions – we create the kind of value that revolutionizes business operations and industries. Innovation and continuous improvement runs through everything we do, from relevant technology solutions to industry-leading asset management strategies.

Our team of expert hardware engineers, software developers and digital transformation enablers offer management, installation and consulting packages tailored to give our customers peace of mind about their mobile and stationary assets.

With a successful track record in providing quality innovative technology solutions, we have evolved into a dynamic brand; fortified with the ability and capacity to add value to the everyday business operations and activities of our customers.

Milestones

- 30 years in business
- 2012: Best IT Fleet Management Product Award (Institute of Government for Research and Development)
- 2014: Became a member of the Chartered Institute of Logistics and Transport
- 2014: Licensed by Nigerian Communications Commission (NCC) to provide Vehicle Tracking Services within Nigeria.
- 2019: Best Technology Solution Company of the year- Africa (Global 100 M&A Awards)
- 2019: Best Use of Technology in Fleet Management-Logistics (Global Business Outlook Awards)

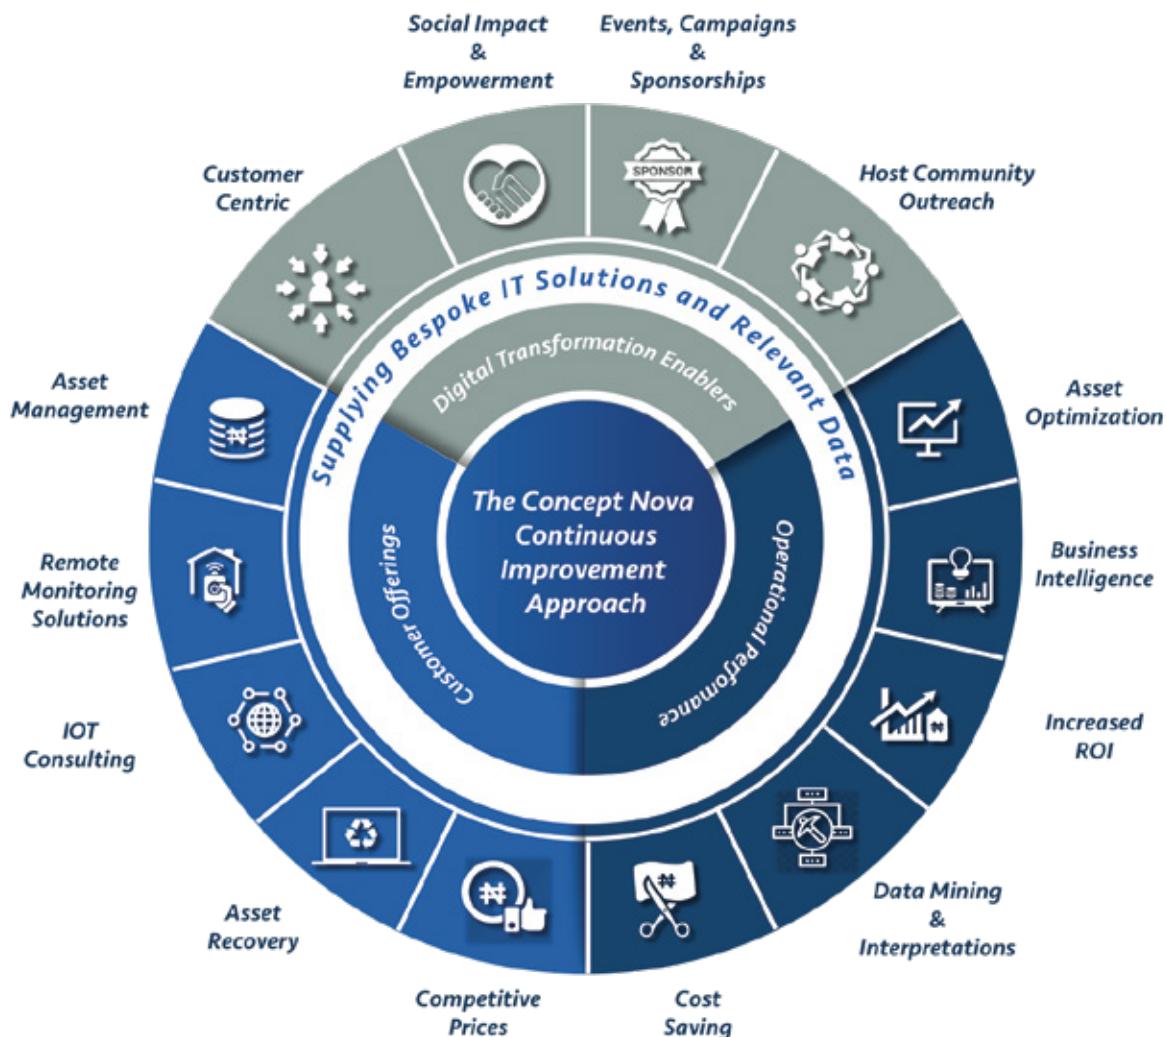

➤ How We Can Save You Money

We live in the digital transformation era and the demands of customers have evolved with the times. To maintain assets, optimize operations and maximize ROI, organisations are in desperate need for innovative and cost saving technology.

Armed with a continuous improvement philosophy, Concept Nova meets these demands by implementing an integrated technology-enabled ecosystem. We leverage on our team of expert hardware engineers, software developers and digital transformation enablers to bridge the gap across the digital transformation value chain.

A capitalizing force within the connected economy in Africa, we provide a value-driven ecosystem that delivers bespoke solutions and helps our customers make smart business decisions backed by relevant data.

So, if you are in the market for bespoke technology solutions, contact us today.

➤ Pro-Drive

Save up to 15% on maintenance cost and extend asset lifespan by at least three years or more.

Are you a business or Corporate Organization seeking out ways to increase the lifespan of your cars and fleet by at least 3 years? Looking to reduce your maintenance and repair cost by at least 15%? Do you value the way your vehicles are used? Our Driver Advanced Profiling solution can help.

ProDrive is an In-Vehicle Monitoring System (IVMS) designed to provide cost savings by facilitating effective monitoring and reporting of drivers' behaviours, performance and vehicle usage based on parameters ranging from Harsh Acceleration, Harsh Braking, Harsh Cornering, over-speeding and Excessive Idling.

Based on the comprehensive profiling and assessment of drivers' driving habits, scorecards and grades are generated and sent as SMS and Email Notifications to Drivers and Decision Makers serving as a yardstick to either reward or reprimand drivers.

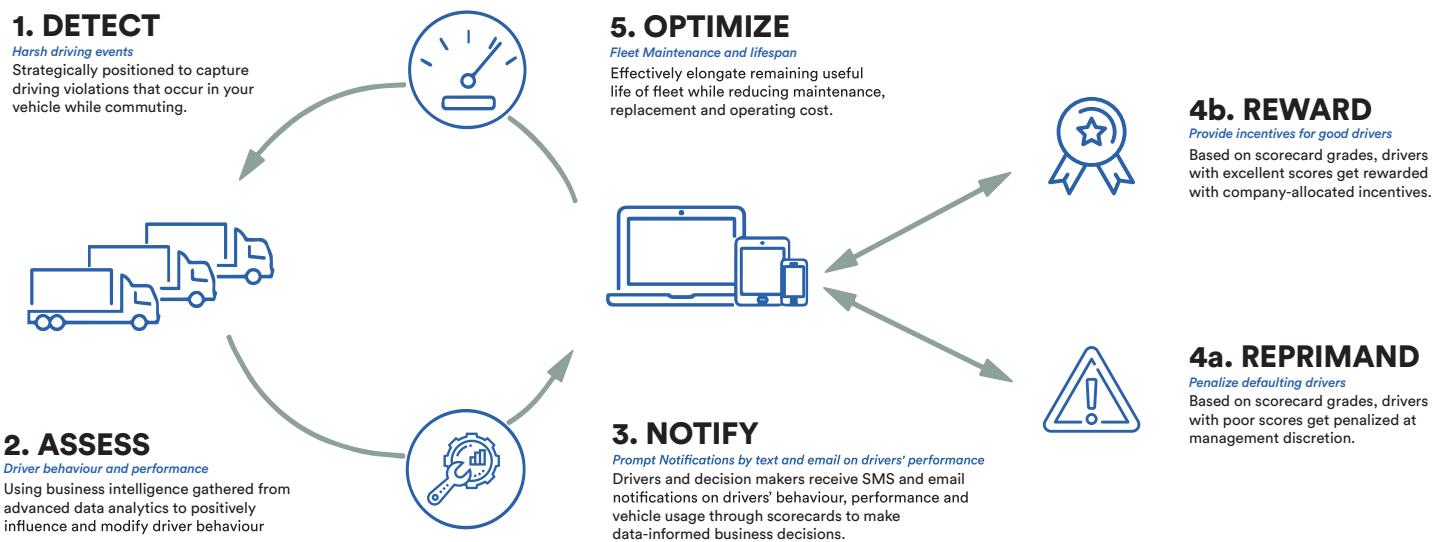

This technology solution is perfect for organizations looking to enforce safe driving habits, increase the lifespan of cars and fleet by at least 3 years, get detailed information on the performance of drivers and save millions of Naira annually on Maintenance, Repair and Operations (MRO) costs.

This comprehensive driver profiling solution has achieved significant cost savings for businesses within several industries, ranging from Transportation, FMCGs, Oil and Gas, Retail and Wholesale, Pharmaceuticals and Non-FMCGs, amongst others.

Features and Benefits:

- Significant cost saving by guaranteeing increased vehicle lifespan by at least 3 years
- Significant cost saving by reducing maintenance and repair cost by at least 15%
- Reduced downtime of vehicles
- Increased after use-value of vehicles
- Protection of company image
- Real-time recording of violations to caution poor driving habits
- Proactive feedback of poor driving habits to both drivers and decision makers via sms and email
- Effective system to implement incentives and penalties to enforce safe driving

How It Works

➤ Fuel Control System (FCS)

Eliminate diesel leakage and theft challenges in your day-to-day operations.

Are you a business or Corporate Organization experiencing diesel leakage and theft challenges in your day-to-day operations? Would you like to monitor your diesel usage trends in your trucks, generators or storage tanks? Interested in saving cost and enjoying ROI on every litre of diesel purchased? Our diesel management solution can help.

Fuel Control System is a state-of-the-art telematics solution that puts control of stationary and mobile assets in your hands, allowing you save cost, maintain profitability and meet rising business demands.

With this diesel management solution, you can detect leakage challenges due to perforations and faulty hardware; while monitoring, auditing and reporting diesel usage trends for accountability purposes. To assist decision makers in improving business performance and meet rising demands, real-time alerts and push notifications about changes in diesel levels are sent via SMS and email."

The Fuel Control Solution has helped many businesses in several industries, ranging from Pharmaceuticals, FMCGs, Mobile Telecommunications, Retail and Wholesale, Hotels and Hospitality, Freight and Haulage, Oil and Gas amongst others.

Features and Benefits:

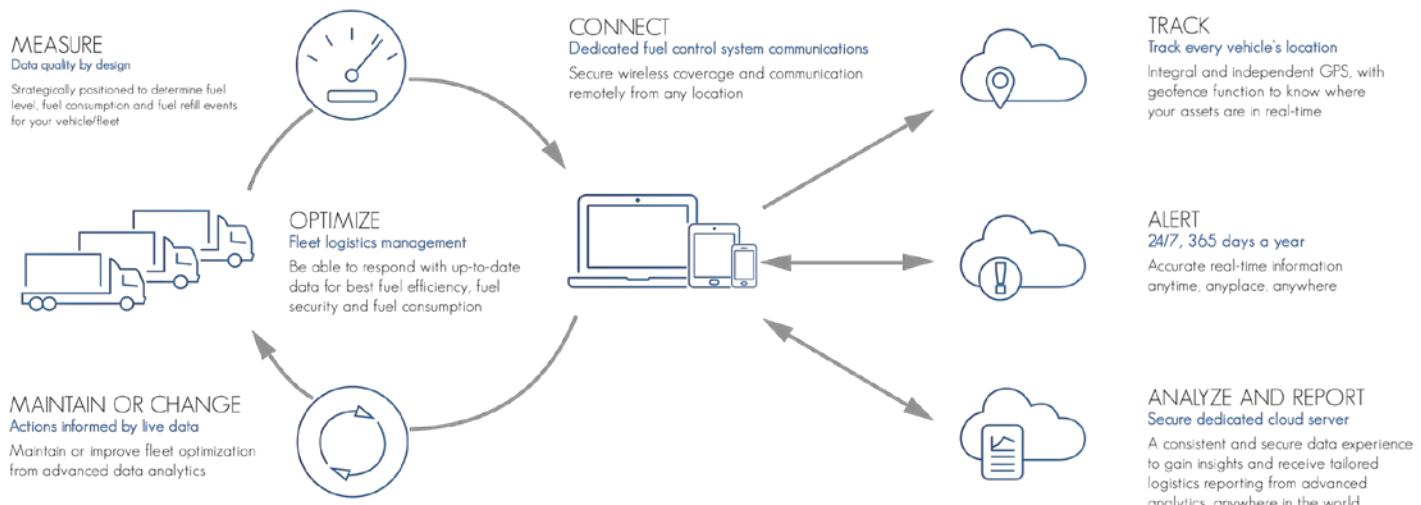

- Prevention of diesel theft occurrences during offloading and refuelling activities
- Cost saving, with ROI on every litre of diesel purchased
- Early detection of leakage challenges due to perforations or faulty hardware
- 24/7 remote monitoring, auditing and reporting of diesel usage trends for accountability purposes
- Real-time alerts and push notifications (via SMS and email) about changes in diesel levels

Customer Testimonial

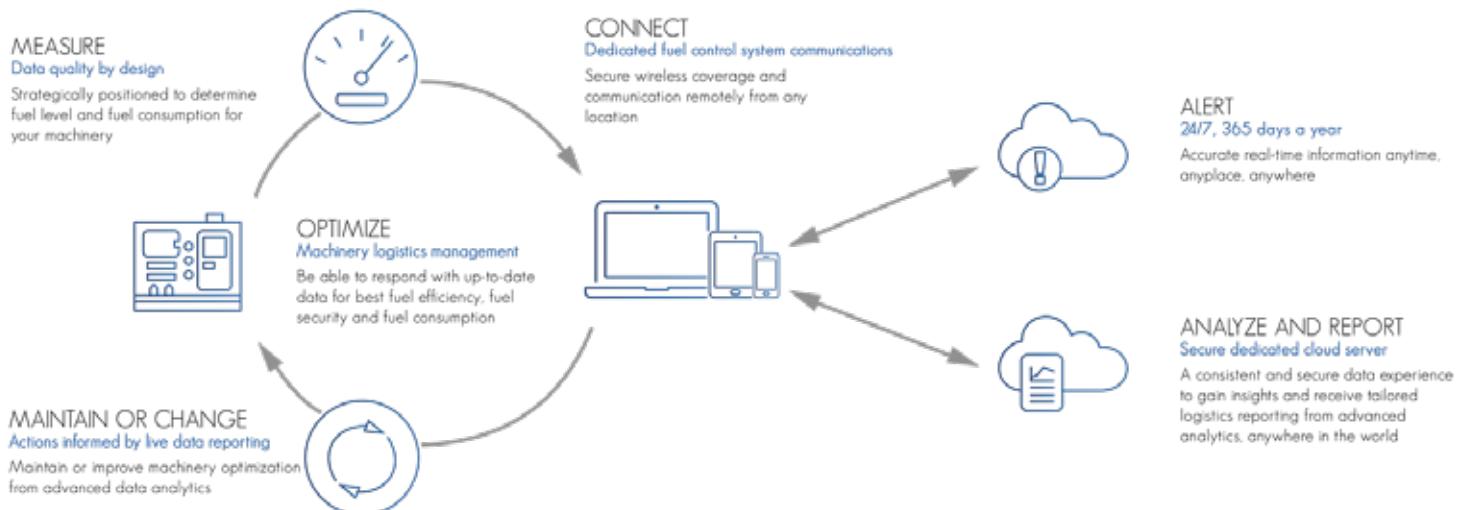

"Diesel is one of the top three expenses incurred by my organization every year as we rely heavily on our generators for constant electricity supply. For some time, we suspected our diesel suppliers were short-changing us by not delivering the exact volume of diesel paid for. Using Concept Nova's diesel management solution helped us confirm our suspicions, get our money's worth and save millions of Naira."

Obi Okafor, Admin And Procurement Manager At A Financial Services Firm

➤ Mobile FCS: How It Works

➤ Stationary FCS: How It Works

► CargoSafe

Prevent theft, enjoy premium visibility and 24/7 real-time tracking.

Looking to save cost and prevent potential losses incurred from theft and goods diversion? Are you interested in detecting and deterring unauthorised access from entry into your warehouses and trucks? Would you like to remotely monitor and account for your assets and valuables? CargoSafe, our intelligent tamper-proof solution can help.

CargoSafe is an affordable asset protective solution providing corporate organizations and individuals' premium security, visibility and an effective means of remotely monitoring and tracking stationary, mobile assets (containers, trailers, and cargo trucks) and bulk cargo transportation, which need safe-guarding on a daily basis.

With CargoSafe, you can conveniently save cost by neutralizing theft and goods diversion threats from potential losses that could be incurred, and enjoy high ROI as valuable goods and assets remain 100 percent protected.

It serves the dual purpose of being a GPS tracker and an electronic tamper-proof solution powered by long-lasting batteries thus requiring no external power supply during operation except for the occasional battery recharge.

Our affordable tamper-proof solution has helped many businesses in several industries, ranging from Freight and Haulage, Manufacturing, ICT, Pharmaceuticals, Retail and Wholesale, Mobile Telecommunications amongst others.

Features and Benefits:

- Saves cost by preventing potential losses incurred from theft and goods diversion
- 24/7 Remote monitoring and accountability of personnel via SMS, email and App lock / unlock alerts
- Effective tamper-proof mechanism for premium protection against tampering and theft attempts
- Real-time tracking and geo-fencing of mobile assets
- Extendable and customizable lock string
- Long-lasting rechargeable battery (up to 20 days)
- Built-in GPS and GPRS module
- Water-proof

Customer Testimonial

"Success for us means accountability and proper storage keeping. Last year, our warehouses in Apapa and Mile 2 were frequently robbed, leaving us with damaged property and loss of goods. We tried several security measures, from new security guards to CCTV but nothing fully worked. Concept Nova's CargoSafe solution stepped up the security game with its product. Since we fully integrated the solution, we have saved millions of Naira, increased accountability and successfully mastered how to prevent theft incidents."

Abiodun Adedeji, a Warehouse Manager at a Manufacturing company

► **FleetTrak (Fleet Management Application)**

Reduce your fleet costs while achieving complete transparency and control.

Are you a business or Corporate Organization looking to boost the management of your fleet? Would you like to increase cost savings, productivity and smart decision making about your fleet? Interested in total transparency of your fleet maintenance, vendor management and lifespan efficiency of vehicles? Our Fleet Management Solution can help.

Our FleetTrak solution is a fleet management application built to improve the efficiency of fleet operations; ranging from cost and budget management, maintenance and repairs (preventive and corrective), asset document management and other fleet management related activities.

With unique industry-winning features that set the standard for fleet management solutions, FleetTrak resolves theft and mismanagement issues, monitors fleet maintenance scheduling and manages procurement negotiations with vendors.

Modelled to meet all your fleet's needs and effectively enhance its performance, this fleet management application accounts for expenditure budget on fleet, reduces the cost of managing your fleet, manages manpower efficiency and puts you miles ahead of your competition.

The FleeTrak solution has effortlessly facilitated the day to day management of 5 to 5,000 units of fleet for various businesses within numerous industries such as Transportation, FMCGs, Freight and Haulage, Oil & Gas, Non-FMCGs, Educational Institutes and more.

Features and Benefits:

- Saving costs due to reduced unscheduled maintenance and maximum utilization of fleet thereby increasing the lifespan of assets.
- Effective Planning of replacement of assets by identifying and managing under or over utilized vehicles
- Efficient resource allocation, trip management and Improved overall workflow
- Proper documentation of vehicle information as well as drivers' personal and professional information.
- Service schedules and automated reminders for preventive maintenance
- Monitor purchases and services provided by vendors

► Delivery Management System

Track your delivery progress, close transactions, create orders remotely and schedule deliveries from any device.

Does your organization lose up to / more than 10% of your revenue to delivery issues within your supply chain? Are you in the logistics, supply and distribution chain in need of maximum visibility and control over your business operations? Are you dealing with fragmented operational processes while trying to deliver excellent service to your customers? Our Delivery Management Solution can help.

DMS is an effective proof-of-delivery monitoring and management system that manages the fragmented end to end processes and business integration for Corporate Organizations, businesses and other key players in the logistics, supply and distribution value chain. It also provides an automated waybill generation system which is available to ensure ease of verification at all levels of order generation, vehicle loading and transaction verification.

With this solution, drivers, employees, contractors and couriers can conveniently capture the proof of delivery lifecycle from any location nationwide while the delivery process is tracked remotely. Errors are reduced as paperwork is eliminated and productivity increases within the organization. Efficient same-day delivery strategies can also be implemented to balance urgency and convenience all year round.

This affordable solution has helped many businesses manage thousands of deliveries; continuously providing value across the logistics, supply and distribution value chain towards the attainment of a Connected Economy.

Features and Benefits:

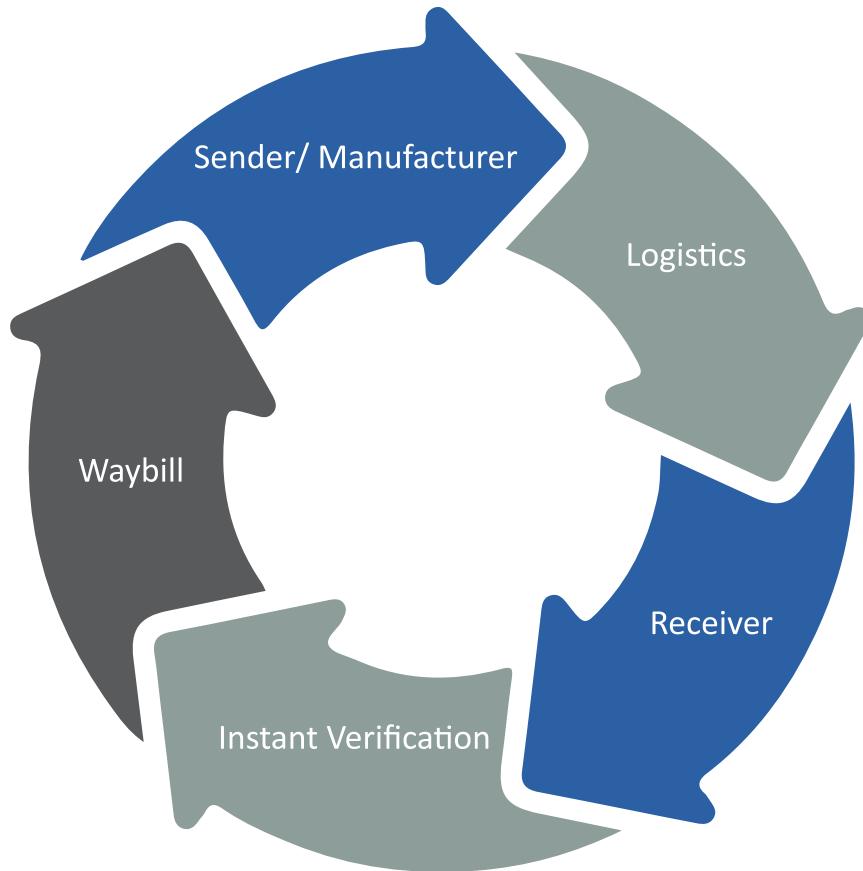

- Fast Turnaround Time for deliveries using vehicle tracking integration, geo-fencing and route optimization.
- Guarantees authentic proof of delivery by electronic waybill generation and digital signatures for accountability
- Eliminates theft and manipulation of waybills
- Higher profit and productivity
- Cost effective and affordable
- Geo-tags and timestamps are enabled for audit purposes
- Higher volume of deliveries managed
- Multiple user integration
- Reporting templates for audit and decision making efficiency
- Seamless communication between internal stakeholders

Customer Testimonial

"For a company of our size, we take at least 35,000 delivery orders every month across more than 75 locations nationwide. Unfortunately, over time, we found it difficult to manage the delivery processes across the country. Our Customer service numbers recorded an increase in dissatisfied customers. While some complained about their packages being tampered with, others informed us they never received their packages. Thanks to Concept Nova's Delivery Management Solution, we have been able to get real-time proof of deliveries remotely, our customer service channels have recorded a 47% increase in customer satisfaction and we no longer have to worry about losing our records from previous years or voluminous paperwork. With DMS, we have been able to store over 10 years of valuable data about all our deliveries nationwide."

Miracle Anthony, Head of Logistics, Operations at a Multinational Logistics Company

How It Works

Sender

Dashboard: An instant view of every important thing to you

Product Management: Create and manage the list of outgoing products

Order Management: Create and manage orders to be shipped with their corresponding waybill

Shipment and Monitoring: Send goods via your Logistics vendor. You can track it till it gets to your receiver

Vendor Management: Manage your Logistics vendors. The number is not a challenge

Logistics

Driver Management: Manage the drivers on your list. Assign and reassign drivers with ease

Vehicle Management: Allows the Logistics Managers to allocate vehicles. Vehicle availability and efficiency are criteria to determine this

Shipments: Accept or reject shipment request from senders

Receiver

Access waybill and close transactions

➤ **Route Management System**

Manage regular transportation routes and schedules effectively.

Are you interested in staying competitive and generating more sales by delivering to your customers on time? Are you looking to win more business, retain customers and keep them satisfied? Would you like to build route plans and have your entire fleet run at maximum efficiency? Are you looking to increase brand trust by accurately communicating the estimated time of arrivals for deliveries to your customers? Our smart route planning and management solution can help.

Our Route Management Solution is a navigation software designed to increase operational efficiency and reduce turnaround time. It also builds efficient route plans for multiple vehicles at a time; taking into account the hour of day, day of the week, time of the year, traffic patterns, road closures and vehicle speed to determine the estimated time of arrival at each predetermined location. It also tracks drivers and helps keep you connected real time with fleet activities from any remote location.

This solution is perfect for business owners interested in increasing efficiency by confirming where drivers are once they dispatch for the day. With it, you can easily confirm location, collect status updates, and know exactly where your vehicles are 24/7 with a combined GPS tracking and route planning tool.

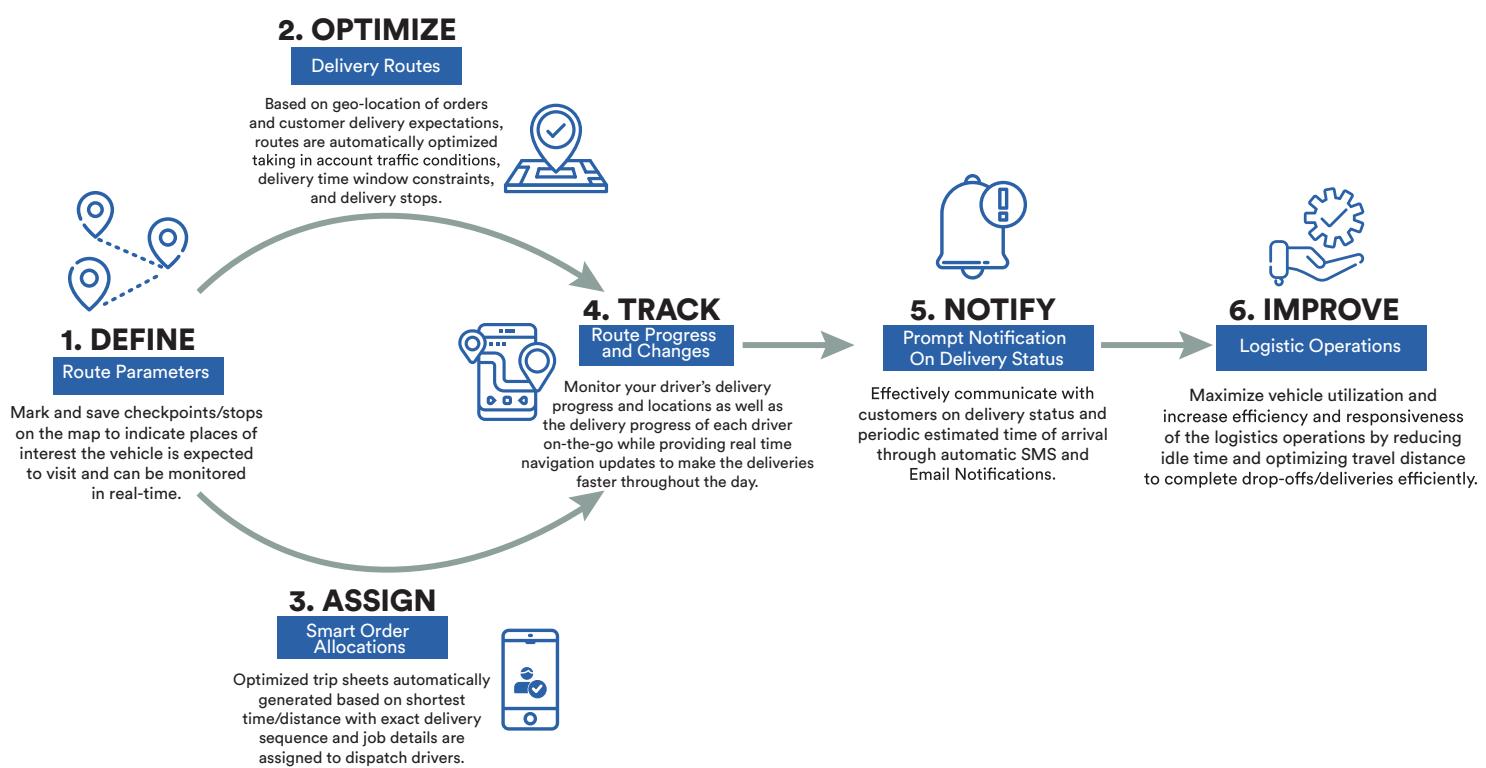

The solution also improves transparency and increases end-user satisfaction. With the ability to provide information about the status of their delivery and the estimated time of arrival, relationships with customers are significantly improved. This, therefore, eliminates customer frustration as informed customers are happy customers.

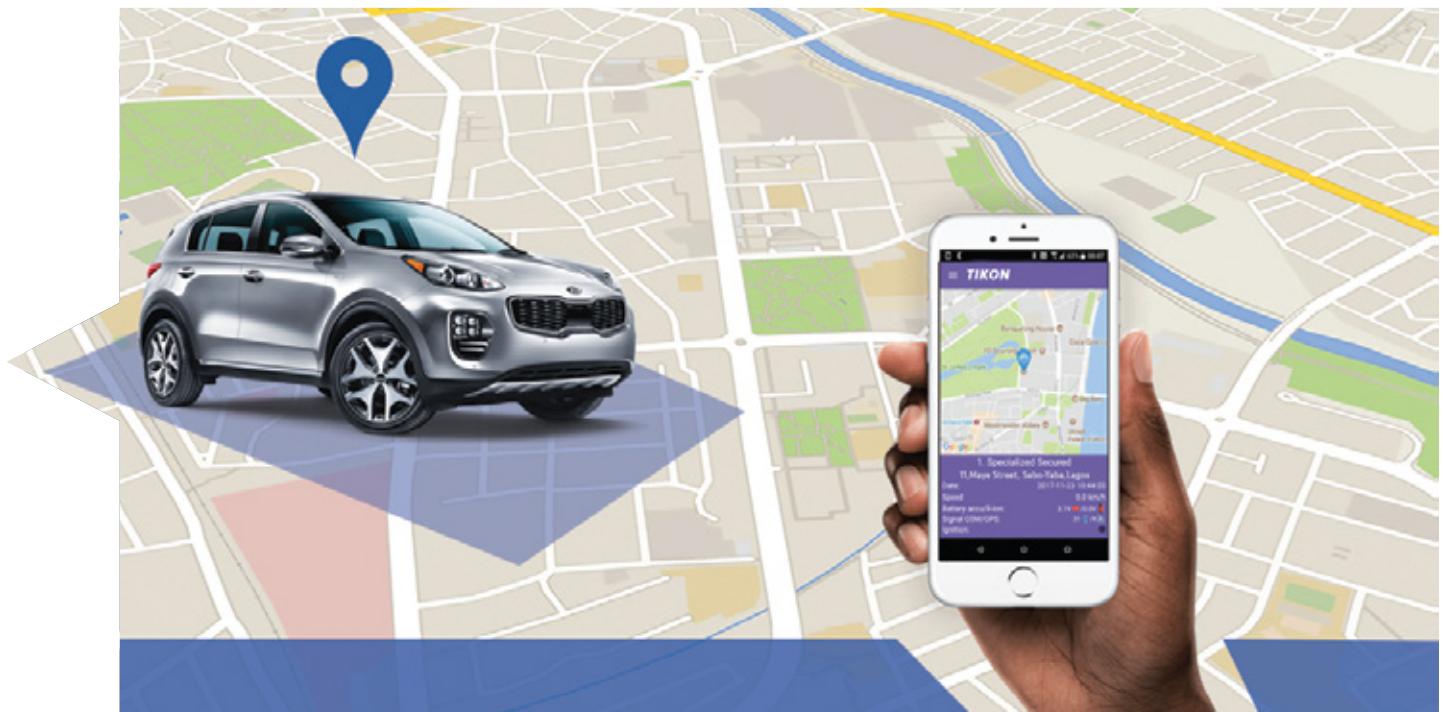

This affordable solution has helped many businesses across the logistics, supply and distribution value chain towards the attainment of a Connected Economy; while optimizing their time and fleet to keep customers happy and satisfied.

Features and Benefits:

- Reduce Turnaround Time and increase customer satisfaction by optimizing logistics operations from pick up to delivery through effective route planning.
- Significantly reduce operating expenses by optimizing intra and interstate routes, saving on fuel costs and avoiding accidents.
- Automated notifications and alerts on route diversions, take-off and delayed arrivals
- Increased worker productivity through improved driver behaviour resulting from the monitoring of working hours and vehicle usage.
- Route management and schedule optimization (map out, store and review)
- Fleet optimization
- Optimize routes - by using powerful management software to minimize drive time and fuel consumption while maximizing drop-offs.
- Improve communication - through a cloud-based platform that links drivers, operations managers, and customer service teams with real-time updates so that everyone is on the same page.
- Increase profitability - with a route planning solution that improves productivity, reduces fuel costs and supports management reporting for greater visibility.
- Manage fleets - organize vans, trucks, and other delivery vehicles using built-in fleet management tools.

How It Works

► TIKON

Monitor and stay in control of your fleet with TIKON, our tracking technology solution you can trust.

Would you like to utilize your fleet more efficiently, reduce excess idling and save money? Are you looking to actively protect your fleet of vehicles against theft and other illegal activities? Are you interested in remotely tracking and receiving notifications of your vehicle location and status at any time of the day, from anywhere in the world? Our fleet and asset tracking solution can help.

TIKON is our affordable vehicle tracking solution designed to enhance safety, security and accountability for fleet and mobile assets by providing access to real-time data, alerts and reports. This solution caters to corporate organizations, businesses and individuals who are interested in utilizing their vehicles and reducing fuel wastage.

It provides live and instant information regarding the location of your vehicle, updates on any idling and tracks your vehicles when in the possession of a third party. With this information, you can see whenever the third party goes off track and can respond instantly when any issues arise.

This state of the art telematics solution has the ability to track up to 5,000 mobile assets - ranging from industrial trucks, cars and motorcycles. Our wide range of TIKON packages are specially designed to meet the vehicle tracking needs of organizations, businesses and individuals who value their fleet and assets.

This affordable solution has helped many businesses with fleets as well as private cars for individuals who value their cars and enjoy monitoring the location of their vehicles; keeping our customers happy, informed and satisfied.

Tracking with TIKON remains a great way to keep assets safe, stay in control and be smarter than the others. Check out the packages below.

BASIC

This tracking solution package monitors and records all locations visited by your vehicle in real-time. Designed to meet your basic tracking needs, this solution provides you trip reports and guarantees you emergency recovery services for your vehicles in the event of theft.

TRACK & TRACE

This tracking solution package offers you all the features the Hybrid package provides with the added advantage of being able to service a fleet of vehicles. This helps organizations make informed decisions on their fleet operations. If you are interested in constant visibility and control of your assets, this package is best suited for you.

PRIME

This tracking solution package offers a bouquet of advanced features such as unauthorized driving alerts and violations to help in making better-informed decisions.

Unique add-ons can also be integrated to optimise fleet operations, enjoy massive Returns-On-Investments and save costs. They include but are not limited to Fuel Control System, Fleet Management Application, Delivery Management System and ProDrive.

HYBRID

This tracking solution package offers you all the features the Basic package provides with the added advantage of an in-built listen-in feature. It also gives you complete control of your vehicle even when it is in the care of a third party.

PORTABLE

This tracking solution package offers you all the features that the Hybrid package provides with the added advantage that does not require any installation. Fortified with its long-lasting rechargeable battery, it is portable and also allows you to listen-in on conversations.

It is perfect for organizations and individuals who are always on the move or have goods-in transit on a regular basis.

LITE

This tracking solution package offers you all the features that the Hybrid package provides with the added advantage that offers an SOS panic button that sends instant alerts when activated.

Fortified with its long-lasting rechargeable battery, this solution is perfect for organizations and individuals who consider the safety and security of your staff, family members, friends and loved ones.

Features and Benefits:

- Real time location monitoring and control over assets
- Improved fleet efficiency and productivity
- Improved vehicle maintenance and reduced fuel consumption
- Provides information that would enhance decision making
- Assures vehicle recovery in the event of theft
- Provides information about [potential] misuse of assets
- Improves the efficiency and productivity of fleet
- User-friendly
- Dedicated technical support

➤ C-Protect

Protect yourself, loved ones, employees and acquaintances from glass shatter and theft.

Are your glass windows a vulnerable point of entry for thieves to rob you? Would you feel safer knowing your windows are extra-protected? Do you want to safeguard your life, loved ones and assets? Our shatter-proof solution can help.

C- Protect is the transparent shatter-proof glass film which provides suitable protection in all environments where there is a risk of glass breakage, burglary or vandalism. With C-Protect, you get an added layer of protection on all glass surfaces – one that's virtually invisible. This shatter-proof solution makes glass harder to penetrate as it holds shattered pieces in place; helping keep both people and property safe from dangers posed by intruders.

C-Protect makes it harder to break through your glass doors and windows. These micro-layered and tear-resistant films hold the fragments in place – where they can't hurt your family or your belongings. Instead of a quick smash and grab job, a would-be robber is faced with a window that won't yield quickly or quietly. And the longer it takes an intruder to break through, the longer you have to get help. It can be used in car windows, office buildings, stores, schools, industrial premises, offices and homes - amongst others.

This affordable solution has helped many businesses across multiple industries and individuals; while enhancing safety and security efforts to keep customers happy and satisfied.

Features and Benefits:

- Maximum protection and security guaranteed
- Prevents injuries
- Not easily detectable by the human eye
- Adaptable to all glass surfaces, types and shapes

➤ POOL-AR (Automated Request)

A better and simpler way to make work trips easier for everyone.

Does your team need to constantly be on the move to achieve top-line results to make profit? Are you looking to simplify your team's transportation and easily manage their work trips? Is your Organization spending millions of Naira in operational cost for maintaining pool cars? Our Transport Demand Management Solution can help.

POOL-AR is our automated request application which keeps your ever-moving employees productive by simplifying the ground transportation needs and processes required to manage work trips, reduce time lag, and improve customer service efficiency to drive repeat business and profitability.

With this solution, organizations can easily grow staff strength without having to worry about increasing fleet size. It allows for automated vehicle requests, allocation and usage with little human interference. Also, all available fleets are efficiently utilized and the possibility of incurring high Maintenance, Repair and Operations (MRO) cost is significantly reduced.

It can also be integrated as a module into other solutions such as;

- FleeTrak FMA (our Fleet Management Application); where it facilitates vehicle requests alongside other functions of the solution.
- DMS (Delivery Management System); where it makes it possible for a supplier to request for shipment of a cargo and be automatically assigned available trucks. This facilitates the delivery of goods within a smarter time frame).

This modernized, economical and resourceful ride-sharing solution has helped many businesses in several industries, ranging from Hotels and Hospitality, Oil and Gas amongst other corporate organizations.

Features and Benefits:

- Generate insight into the movement of staff and its implication on the bottom line.
- Increased vehicle usage and satisfaction with limited resources are guaranteed.
- Collects data on vehicle usage and reduces vehicle allocation scheduling for each trip request.
- Saves time and prevents the double effort needed to document trip requests.
- Budget reporting and long-term cost reduction
- Facilitates quicker and easier decision making for the fleet operation
- Reduces size of fleet and idling time for vehicles
- Customizable monthly reports monitoring fleet usage

How It Works

Step 1: Login to the POOL-AR App

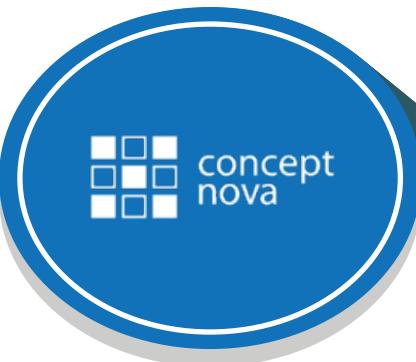

Step 2: Request a ride on th app

Step 3: Driver will be assigned to you within minutes

Step 4: Driver picks you upand drops you off

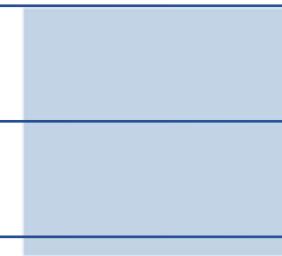

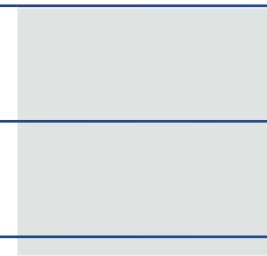

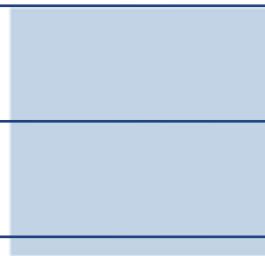

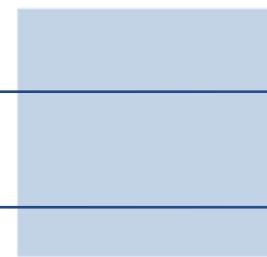

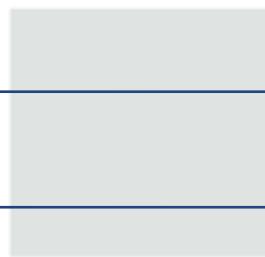

OUR PARTNERS/CLIENTS

"The single biggest factor between success and failure in the competitive world of business is Improvement. The first step to improvement is measurement. If you can't measure something, you can't understand it. If you can't understand it, you can't control it. If you can't control it, you can't improve it. It is time to raise the standard and Concept Nova is here to help you achieve it"

— Chukwuma Ochonogor
